

TRADELENS AI

The only ICT automation engine for NQ and ES futures

TradeLens AI seeds 500 real NQ and ES candles on startup, computes Previous Day High/Low, Asia, London, and 4H session levels automatically. It then scans every 5 seconds for the complete 4-signal ICT confluence. When all four fire during the 9 AM–12 PM New York kill zone, the bot enters a paper trade, manages stop loss and take profit, and logs every result to CSV, logged automatically.

PROBLEM & SOLUTION

Problem

Retail traders spend hours manually scanning NQ and ES for ICT confluence setups, missing entries, overtrading, and lacking execution discipline. The strategy works; the execution is human and inconsistent.

What Makes Us Different

We don't just alert. We **execute**. TradeLens detects full 4-signal confluence with TTL signal memory, enters the trade automatically, manages risk, and logs everything. The first bot built around ICT's actual entry model.

HOW IT WORKS

1

NQ and ES futures data pulled every 5 seconds. 500 real 1-minute candles seeded on startup.

2

Sweep, SMT divergence, **Fair Value Gap**, and **Break of Structure** detected simultaneously in real time.

3

Bot auto-executes on full confluence, manages SL/TP, and logs every trade to CSV with timestamp and PnL.

MARKET

Over **50,000 active ICT traders** follow the Inner Circle Trader methodology, growing rapidly on social media and YouTube. NQ and ES futures volume exceeds **\$200B daily**. At \$299/mo average, we need just **335 customers** for \$1M ARR, less than 1% of the addressable ICT trader market.

PROGRESS

1

Real trade executed

75%

Win rate

+\$2,610

PnL since launch

BUSINESS MODEL

Starter

\$99/mo

- ✓ Live NQ + ES price feed
- ✓ Signal detection dashboard
- ✓ Trade analytics & CSV log
- ✓ ICT session display

Master Bot

\$299/mo

- ✓ Everything in Starter
- ✓ Auto-execution on confluence
- ✓ PDH/PDL + 4H level sweeps
- ✓ SL/TP management
- ✓ Full trade journal

Pro Desk

Custom

- ✓ Broker API integration
- ✓ Live order execution
- ✓ Multi-account support
- ✓ Custom strategy filters

Additional revenue from annual licensing and institutional desk subscriptions at scale.

\$500,000

Build the live broker execution engine, onboard first 100 paying traders, and reach \$30K MRR within 6 months.
